Rotary and Flat
Dieboards You
Can Count On

PROLINE composite/hardwood hybrid

- For extreme applications when durability is paramount

PREMIUM hard maple

- Very stable dieboard constructed of Northern Hard Maple
- Great for long-running dies

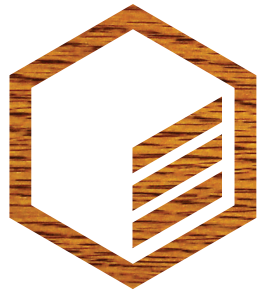

PERFORMANCE american beech

- Durable, stable dieboard that provides a great value to the end user

FLAT maple / custom

- We offer a wide range of the highest quality Flat Dieboards on the market today

TECHNIPLY

1. **QUALITY RAW MATERIALS:** We purchase the raw timber, cut the veneer, and press the dieboards all in-house. This complete control of the entire process allows us to specify and produce ideal dieboard constructions for multiple applications in a high quality and timely manner.
2. **ADVANCED PLYWOOD TECHNOLOGY:** We use a proprietary RF press technology to make all our rotary and flat dieboards. RF essentially cures the plywood from the inside out, ensuring superior dimensional consistency relative to other methods of manufacturing plywood.
3. **STRATEGIC LOCATION:** This strategic location in the center of North America gives us the ability to quickly and economically ship to all customers, saving them time and money.

Techniply is a leading manufacturer of high quality rotary and flat dieboards, as well as custom specialty plywood products. Since Techniply was acquired by the Manthei family in early 2013, it now controls its entire supply chain from stump to dieboard, resulting in consistently high quality products.

The Manthei Group of Companies has 75 years of proven success in the hardwood manufacturing industry—including a custom hardwood veneer business that produces the veneer used in Techniply dieboards. We use 100% northern United States grown, harvested, and cut hardwood veneers manufactured in our own facilities to ensure quality and consistency. Producing consistently high quality products is a top priority for our family of companies.
